

Better data. Better decisions.

An introduction to Lightcast

DATA OVERVIEW & SKILLS

Lightcast.io

What we do

Lightcast, formerly Emsi Burning Glass, combines the best available labor market data from multiple sources to help organizations by **turning real-time data into** actionable insights **for building and transforming the workforce.**

"Lightcast: The Switzerland Of The Global SkillsTech Market"

JOSH BERSIN

Author, CEO & Founder of The Josh Bersin Company

Our data-driven approaches to **mobility** and **strategic workforce planning** help organizations, governments, and educators to:

- 1 **Predict future changes to their workforces** and their impact and adapt to a rapidly-changing skills landscape
- 2 **Identify hidden talent pools** and streamline focus on **skills-based hiring**
- 3 **Create and identify good jobs with upward mobility** opportunities
- 4 **Map reskilling, upskilling pathways** and align learning investments to labor market outcomes

Where we get data

SOURCES

LABOR MARKET INFORMATION

18b+ data points from
Government Sources

ONLINE PROFILES & RESUMES

1b+ global online profiles and
resumes from all over the web

ONLINE JOB POSTINGS

Over 3 billion current and
historical job postings

COVERAGE

GLOBAL COVERAGE

Information on 150 countries,
software packaged insights on
41 countries

COMPANY AND EXECUTIVE CONTACT INFORMATION

9.8M Company Profiles and
10M Executive Contacts

How we do it

Robust market data and rich taxonomies helps unlock opportunities, using skills as a currency

Aggregate Data from Online
Job and Networking Sites
and Government Sources

1+ Billion

Current and historical postings

1+ Billion

Global online career profiles and
resumes

18+ Billion

Data points of government labor
market information

Collect & Deduplicate Job
Postings, Profiles, and
Resumes

Parse & Harmonize Job
Postings and Social Profiles
to Generate Detailed Data

- Job Title & Occupation
- Employer & Industry
- Technical Skills
- Foundational Skills
- Certifications
- Educational Requirements
- Experience Levels
- Wages and Salaries
- Benefits

How we bring data together

INDUSTRY CODES

Country Specific
Taxonomies: Industry
Classifications

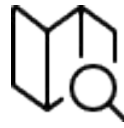

(1,000+ in US, CA, UK, etc.)

OCCUPATION CODES

Country Specific and Global
Taxonomies: Occupation
Classifications

(800+ in US, CA, UK, etc.)

LIGHTCAST OPEN OCCUPATION TAXONOMY (LOT)

Four-Level Taxonomy:
1900+ Specialized Occupation
Classifications

(updated every 6 months)

LIGHTCAST OPEN TITLES

Library:
75K+ Job Title
Classifications

(updated every 2 weeks)

LIGHTCAST OPEN SKILLS

Library, Taxonomy &
Ontology Classifications:
33K+ skills

(updated every 2 weeks)

Government Data

Lightcast Postings and Profile Data

Established classifications and tags **connecting all aggregate data**

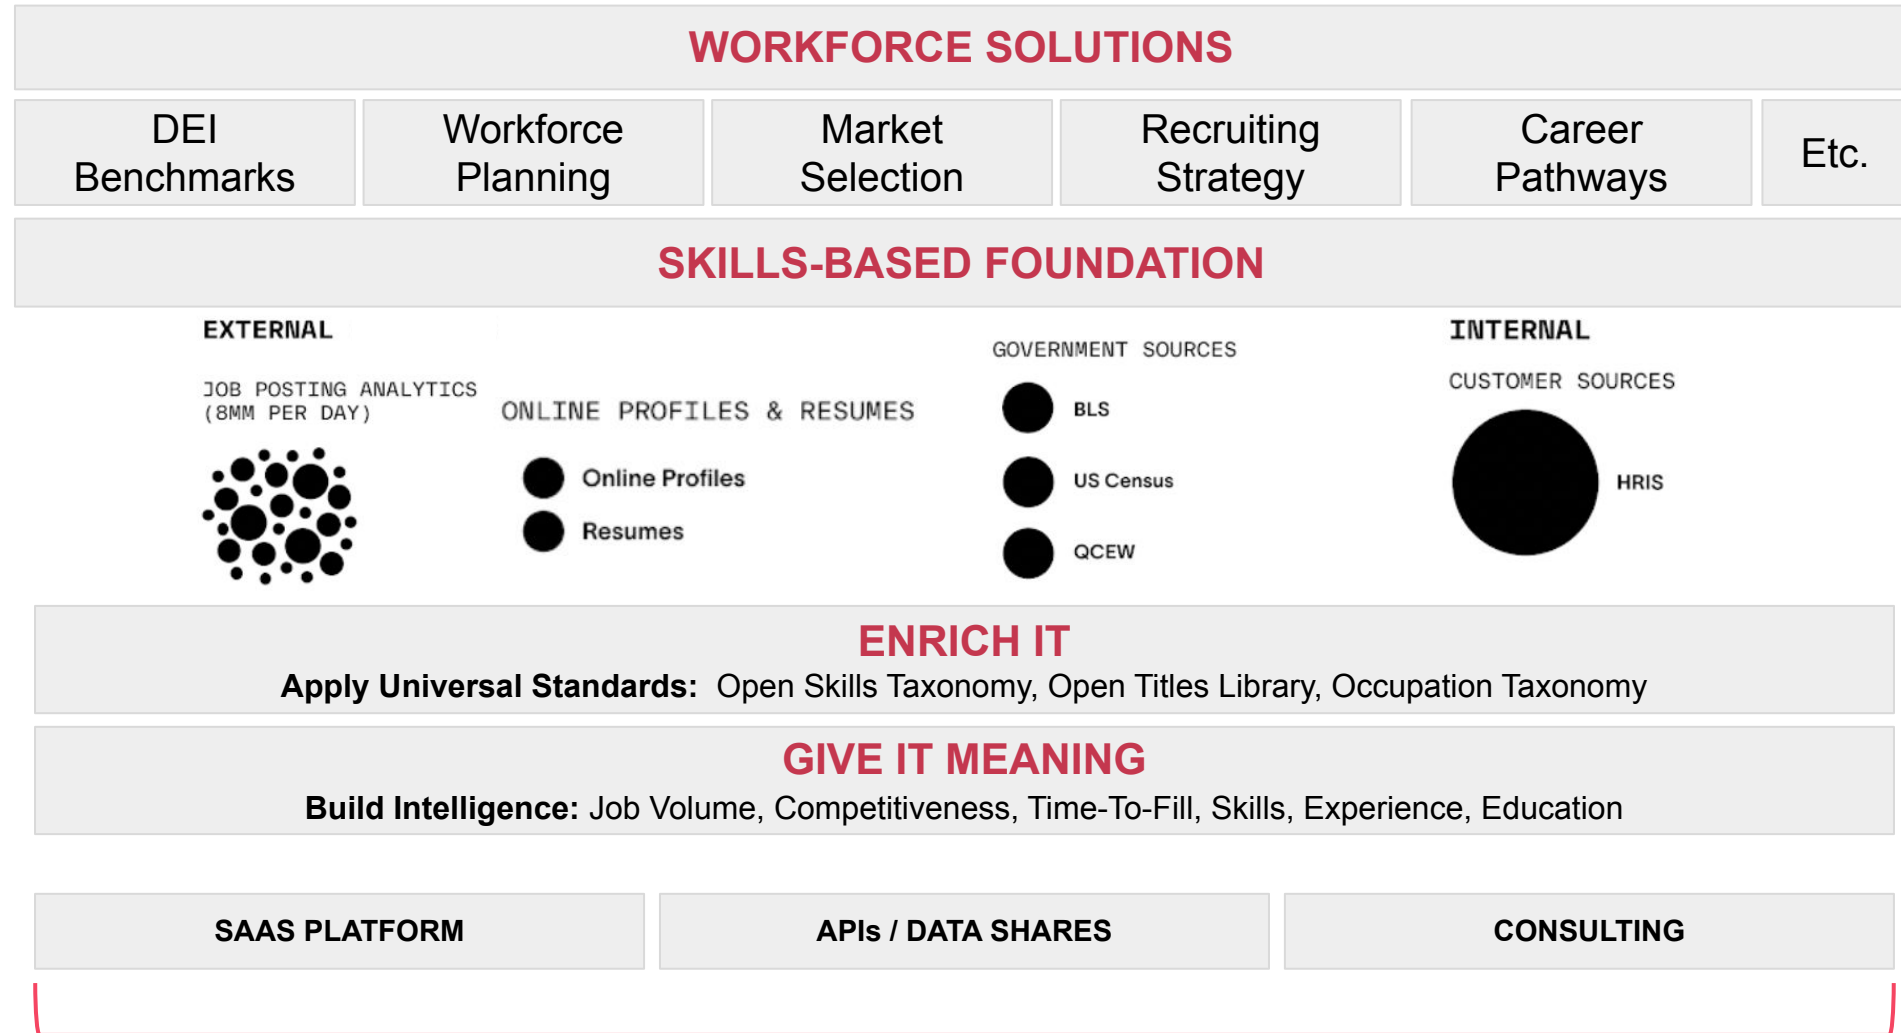

The Lightcast Advantage: Trusted Insights for Workforce Intelligence

You need **data and insights** to help with today's most challenging issues

We aggregate the **most comprehensive** data sources

Apply our **open-sourced** and market recognized data standards

Delivered in **whatever format** you need

Job titles and historical HR frameworks of managing talent and work are no longer effective for solving the current challenges facing our organizations.

THE PAIN

The talent shortage is real and forecasted to continue

Given limited supply and rising costs of talent acquisition, organizations can no longer post and hope

Job titles are no longer a practical mechanism to define work and do effective workforce planning

Given the pace of change, traditional career pathways are not clear and employees are struggling to navigate their career journey

Internal data and fragmented systems are insufficient to plan properly

THE NEED

Understanding of talent trends and market availability

Pivot to more creative talent retention, mobility and development strategies

Define work through a skills lens, a more dynamic and granular mechanism to understand and solve for talent gaps

Target and explore career opportunities at an individualized level using skills as the connector of learning and mobility

External benchmarking and skills based talent intelligence are needed to gain competitive advantage and meet growth needs

How To Deploy Skills

Enrich your job data with Lightcast's Open Skills foundation and market insights.

Skills data is fragmented and only valuable within the context of the individual HR systems. Bring harmony through a common language of skills and connect your job architecture to labor market intelligence to enhance your talent strategies.

Plan & Benchmark

Kickstart your skills journey with [Skills Navigator](#) and upgrade your job data to the language of skills and benchmark to the market with [Talent Transform](#).

Optimize Hiring

Optimize your job postings to outsmart the job boards that are not matching your jobs to candidates and identify where you can find unique skill sets with [Talent Analyst](#).

Target Development

Determine crucial skills for any given role with [Lightcast Consulting](#) and make sure your employees have those skills so you don't lose your employees.

Mobilize Talent

Unlock unique career paths by seeing how skills overlap across your roles with [Talent Transform](#) and empower your workforce to see their potential for their next role.

Deploy skills to empower your organization with intelligence and a dynamic framework to understand jobs, learning and people.

Skills are already flowing through your systems today, now is the time to harness that data, enhance it with **market intelligence**, enrich it with **open taxonomies**, and take your talent strategies to the next level.

Lead your organization in applying a more **granular and dynamic approach** to hiring, developing, and mobilizing your workforce.

Understanding Skills

SKILLS

Competencies at specific tasks or familiarity with specific subjects and tools acquired through education or experience.

Lightcast's skill taxonomy includes knowledge areas, abilities, traits, behaviors, and traditional skill types such as soft / human, hard / technical, and certifications / qualifications.

COMMON SKILL LANGUAGE

A library of skills broadly adopted, regularly updated, machine readable, application agnostic, and open-sourced.

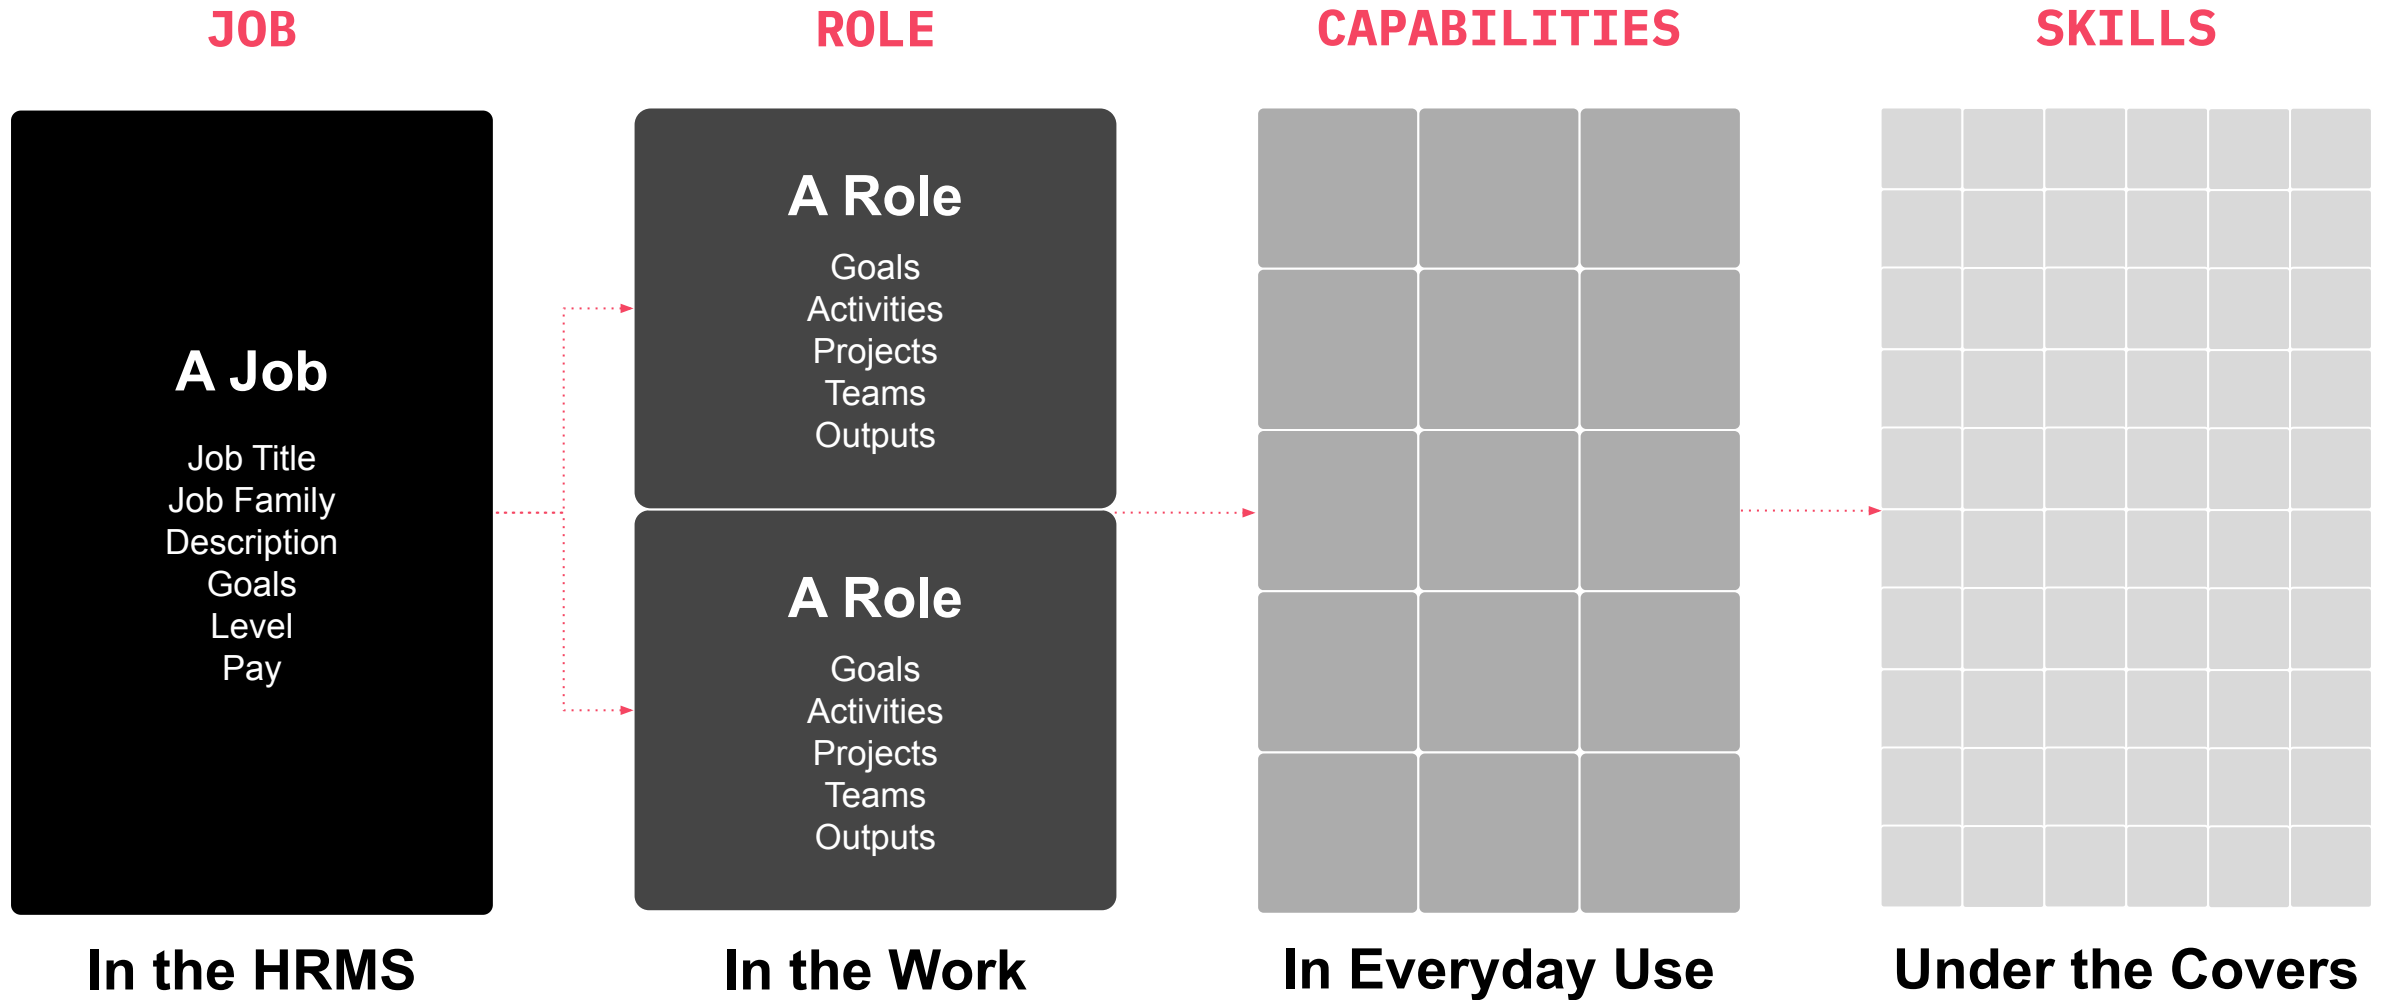

Lightcast is the only market-driven, open-sourced skill standard available.

VALUE OF SKILLS

A better granular definition to understand work, create pathways, archetype roles, guide learning, and provide directional guidance to make role, learning, and hiring decisions.

Skills are not the only solution but a part of the broader set of data and tools needed to bring connection to learning and work.

Understanding Skills

Skill Library

We maintain a collection of 33k+ skills and define skills broadly to incorporate the signals that people and employers use to describe their knowledge and experience

We digest and analyze skill data in millions of job postings and resumes/professional profiles and update the library every two weeks, adding new and emerging skills, modifying existing skills, and removing obsolete skills

To evaluate and refine our skills, we rely on customer requests, feedback, and machine learning techniques

We integrate a human curation process and an ontological approach to discover new and emerging skills in relationship to existing knowledge on talent clusters

We also regularly deploy detailed thematic reviews and research on focused areas to ensure our skills ontology is reflective of the labor market and our skills library is as comprehensive as possible

To maintain transparency, a public changelog is published at: <https://docs.lightcast.dev/updates/skills-taxonomy-changelog>

Skill Philosophy

We believe that the relationships between skills and how they change over time is a key insight into the evolving world of education and work

This analytical approach is dynamic and finds the organic, bottom-up relationships based on the millions of new job postings and resumes/professional profiles we receive each month as well as community suggestions

This is not O*NET or Standard Occupation Codes (SOC) - the acceleration of technological change in recent decades has made top-down, highly structural, taxonomy approaches, like O*NET or SOC, difficult to maintain and keep relevant

Skill Philosophy Cont.

We maintain skill classifications which include:

- **Common Skills** - Soft (or human) skills which are broad statements of ability
- **Specialized Skills** – Unique (or hard/technical) skills related to a specialty
- **Certifications** – Recognizable qualification standards assigned by industry or education bodies

By analyzing the relationships between skills and other aspects of work, we can infer differences in meaning, e.g. “Project Management” in software development versus “Project Management” in construction.

Given this approach, we are able to add skills within weeks of their appearing in the marketplace, then observe how and where those skills settle

Thematic Review Methodology

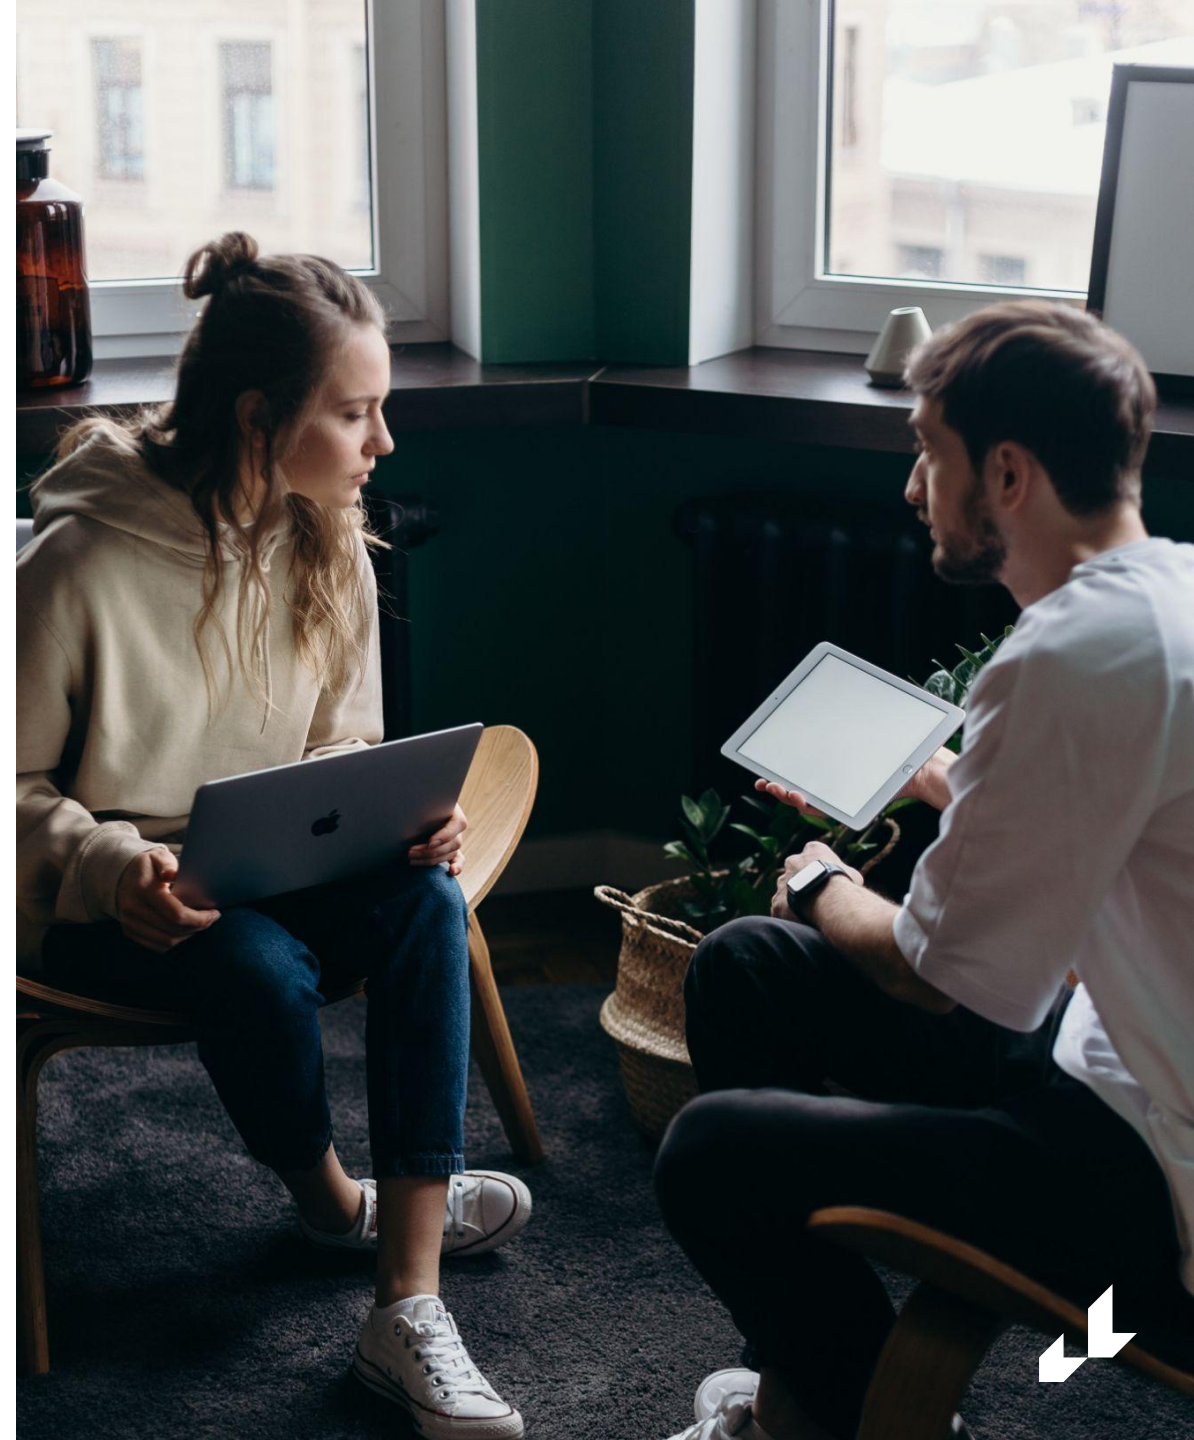

Along with our skills curation process, we also regularly deploy detailed thematic reviews and updates on focused areas based on skill clustering analysis and customer feedback

We research competencies in the selected area to understand what knowledges, skills, and abilities are required of a person in that profession

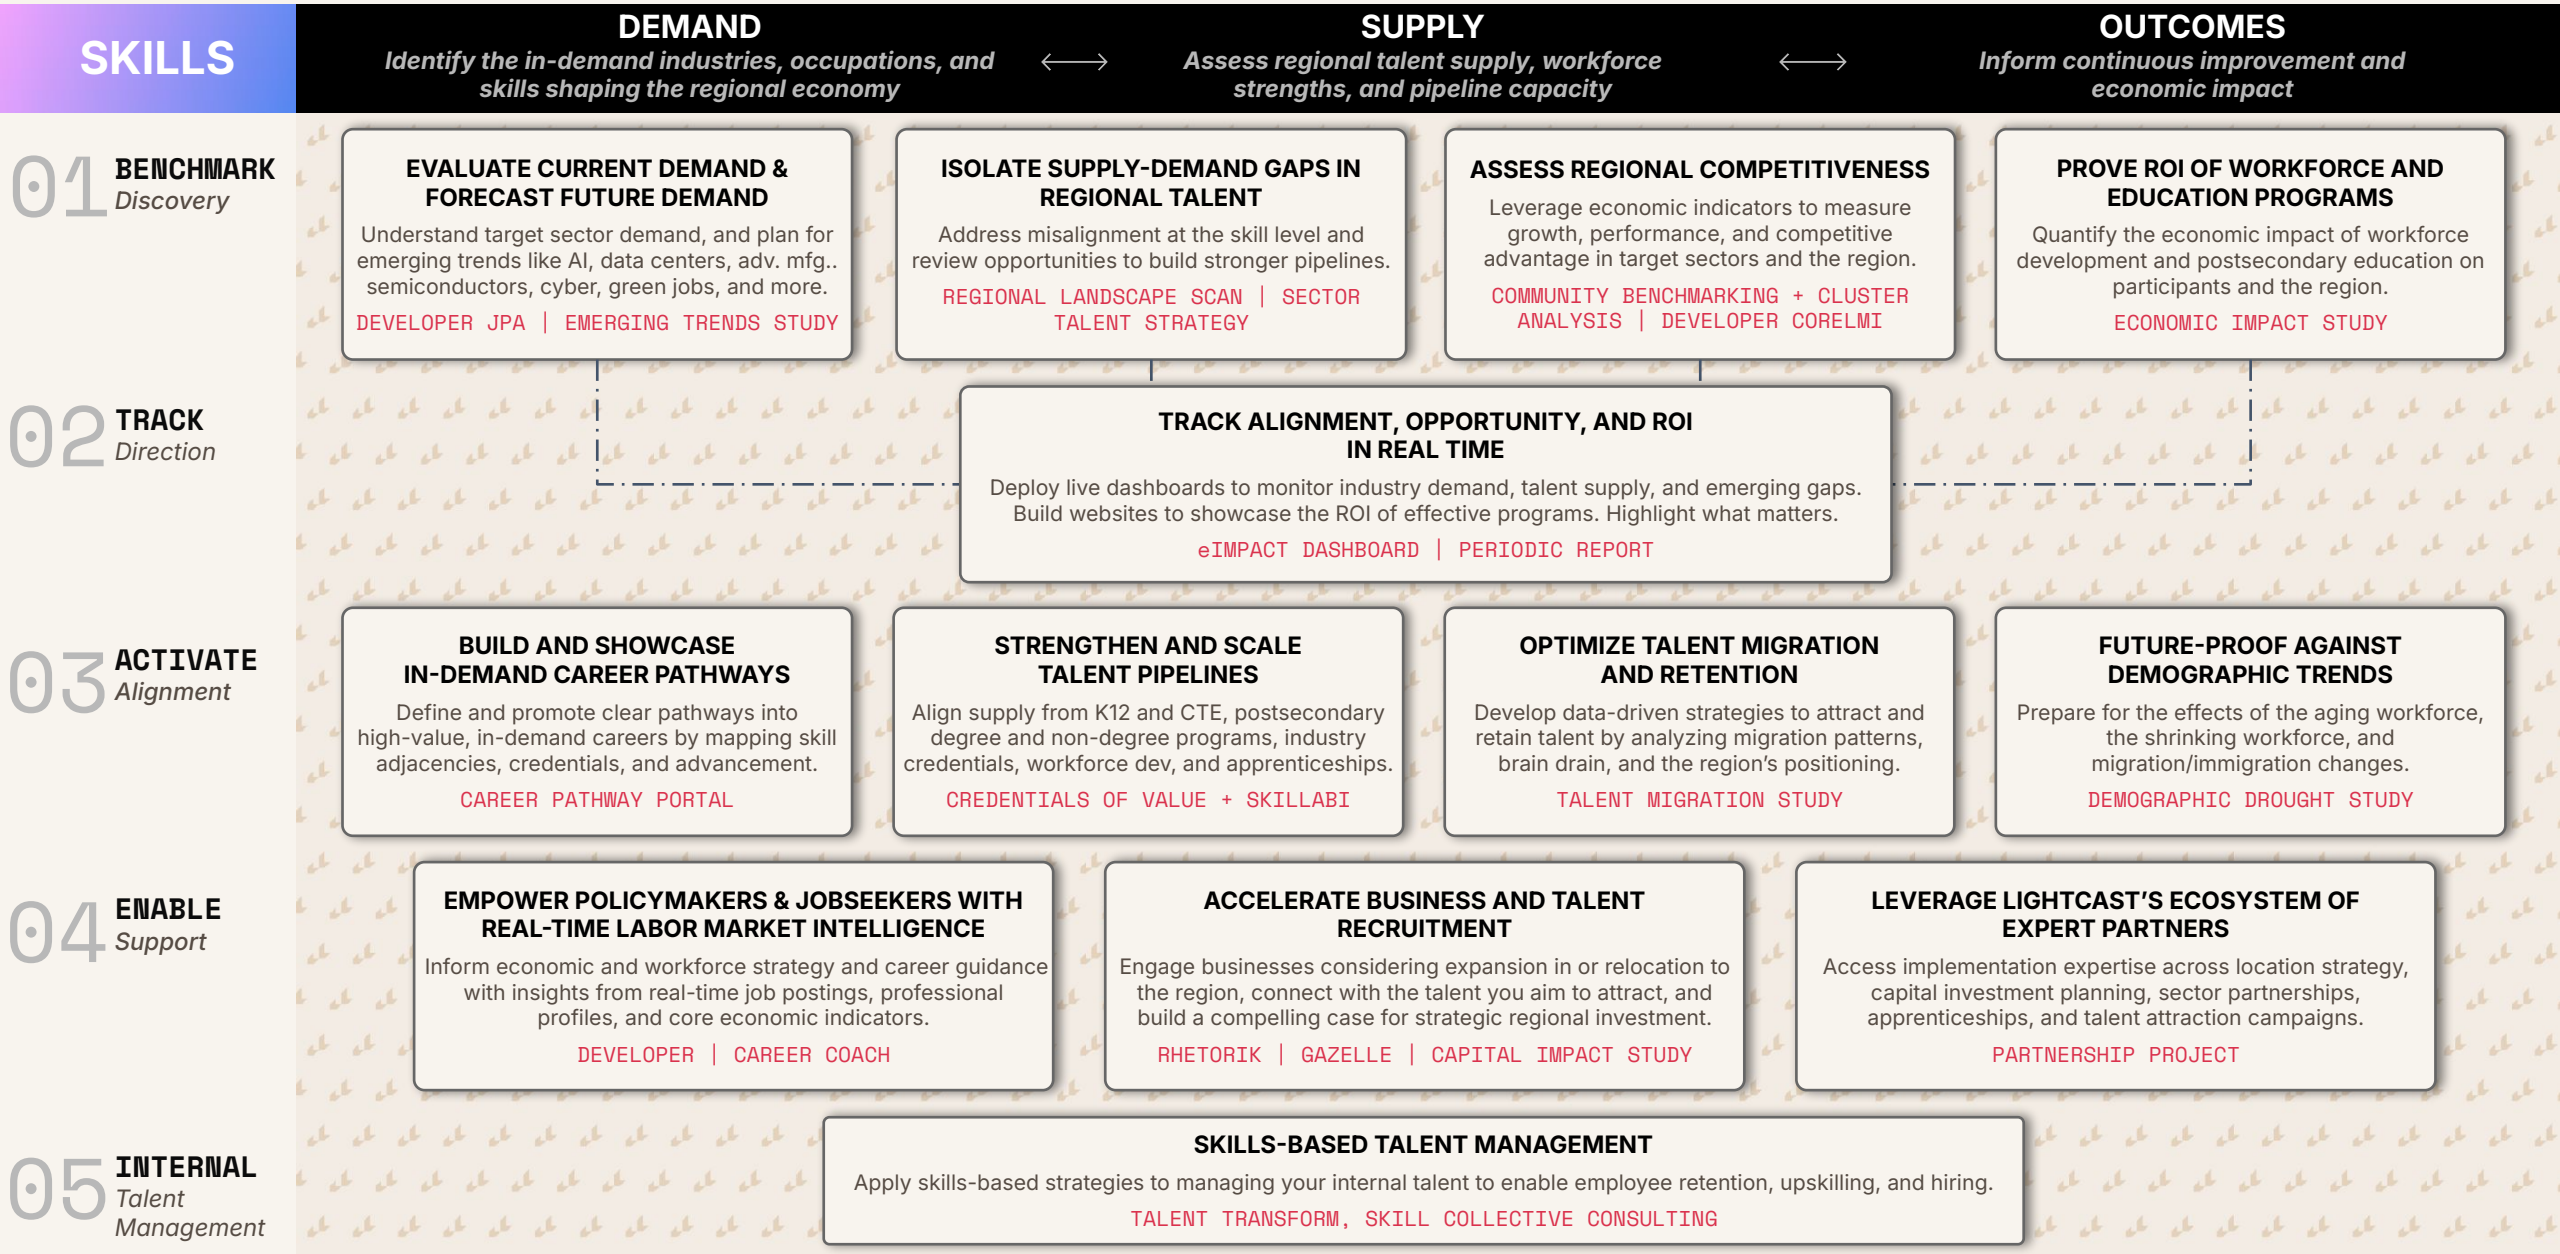

We then use machine learning techniques to discover new emerging trends around our skill clusters

Then we train the model to capture these competencies accurately

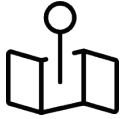

For this process, we select documents that contain related skills and occupations to that area and analyze the surrounding text for commonalities in language usage across documents

Lightcast helps regions align to market demand and achieve meaningful outcomes.

What customers want from our data

MARKET RESEARCH

How can we identify and recommend the best markets for talent?

TALENT SUPPLY

How can we determine the approximate supply of talent in an area?

MARKET COMPETITORS

How can we define the level of competition in a particular region?

COMPENSATION BENCHMARKS

How can we uncover salary insights to help inform pay decisions?

LEADERSHIP ENABLEMENT

How can we inform and educate decision makers?

DEI BENCHMARKS

How do I compare to the market for diverse talent?

JOB & SKILL ARCHITECTURE

How can I normalize my roles and create skill profiles to analyze and compare my talent?

OPEN TAXONOMIES

How can I adopt a common language for skills and job titles to bring structure to my data?

SCALABLE DELIVERY

How can I pipe external insights into my existing applications or dashboards?

Who we work with

44 of the Fortune 50

67 of the Fortune 100

10 of the largest management consulting firms

7 of the top 10 staffing firms

100+ of the top HR Tech and Ed Tech firms

25 years of experience

65 federal agencies and governmental organizations

325 workforce organizations at the state and regional level

450 cities, states, and provinces across the world
